Shift

Shift Gears to More Persistent Production

Shift provides a high level of winter hardiness and durability for profitable hay production over the life of the stand. Large, deep-set crowns allow this variety to stand up to traffic pressure and persist in northern climates. Shift features a dense, dark green canopy with high multifoliate leaf expression providing high quality feed value. It is highly resistant to all major alfalfa diseases, including Aphanomyces Race 1 and Race 2 root rot, contributing to Shift's long stand life and outstanding persistence.

Key Characteristics:

- Large, deep-set crowns tolerant of traffic
- Persistent, long stand life
- Exceptional disease resistance
- High level of multifoliate expression

Winter Survival and Adaptation

| Root Type | Tap |
|-------------------|-----------|
| Fall Dormancy | 3 |
| Winter Survival | 1.4 |
| Stand Persistence | Excellent |
| DRI | 30 |

Disease Rating

| Trait | Rating |
|-------------------------------|--------------|
| Bacterial Wilt | HR |
| Verticillium Wilt | HR |
| Fusarium Wilt | HR |
| Phytophthora Root Rot | HR |
| Anthracnose Race 1 | HR |
| Aphanomyces Root Rot (Race 1) | HR |
| Aphanomyces Root Rot (Race 2) | HR |
| Stem Nematode | R |
| Southern Root Knot Nematode | Test Ongoing |
| Northern Root Knot Nematode | Test Ongoing |
| Pea Aphid | Test Ongoing |
| Spotted Alfalfa Aphid | Test Ongoing |
